Application/Control Number: 09/872,059 Page 2

Art Unit: 2661

### **DETAILED ACTION**

## Specification

1. The abstract of the disclosure is objected to because in the specification, page 3, line 25, " $\Delta \tau$ " is disclosed; however, none of the discloses shown the use or related to the applicant invention with respect to " $\Delta \tau$ ".

Correction is required. See MPEP § 608.01(b).

## Claim Objections

2. Claim 1 and 6 are objected to because of the following informalities:

Claim 1 recites, " $\delta$  ( $\Delta \tau$ ) is a delta function" in line 7. Since  $\Delta \tau$  does not defined the variable in the equation in line 6 " $\Delta t$ " it is suggested to change " $\Delta \tau$ " to " $\Delta t$ ". Moreover, for clarity, it is also suggested to define what "delta function" is.

Claim 6 is also objected for the same reason as stated above in claim 1.

Appropriate correction is required.

# Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claim 1-10 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter on the basis of merely mathematical manipulates abstract idea without any limitation any limitation to a particular problem.

Regarding claim 1, a method claim - it first does some mathematical calculation of signal sequences to see if it satisfies an equation to generate a padded signal frame for transmission. Then the transmitted padded signal is received and runs through some more mathematical manipulations to form a remainder signal according to another equation. Since claim 1 does not call for any computer operation, it will be just a method to merely manipulate purely mathematical problems. The intervening steps of "transmitting" and "receiving" only serves as simple transports of those signals that provides no significant limitations for practical application.

Regarding claim 6, an apparatus claim calls for a system comprising a computer that is programmed to do ... mathematical manipulations of data without any limitation to a practical application (also see MPEP, section 2106, section IV, computer related invention).

Claims 2-5 and 7-10 are also rejected for the same reason as stated above.

#### Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ian N. Moore whose telephone number is 571-272-3085. The examiner can normally be reached on 9:00 AM- 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau Nguyen can be reached on 571-272-3126. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
